Engineer in Computer Science and Entrepreneurship at the Burkinabe Institute of Technology (BIT).
Passionate about software development, the creation of web/mobile architectures and the integration of AI solutions. I am looking for a professional opportunity to put my skills in software engineering and technology project management to good use.

Skills

Technical skills:

Langages : Dart (Flutter),
JavaScript/TypeScript, Python, C++,
COBOL, HTML/CSS, Cython.

Frameworks & Backend :

Git/GitHub, Visual Studio Code,
flutter, React, Docker, MetaTrader
5 (MQL).

Design & Multimedia : Blender,
visual effects, 3D/SVG animations.

Behavioural skills:

Initiative, complex problem
solving, teamwork, project
management, interpersonal
communication.

Education

**Bachelor's degree in Computer Science
and Entrepreneurship** – Burkina
Institute of Technology (BIT)
2023 – 2026 (diploma expected in 2026)

Fields of study: software
engineering, databases, web and
mobile architectures, cybersecurity,
entrepreneurship.

**Internship at the Department of
Computer Science** – Nyankpala
Campus, Ghana, **August 2025** –
September 2025 (Certificate)

1. Professional history

FasoPrépa – Individual project (Principal designer and
developer)

2. Trimodal educational application designed to help students
prepare for national examinations, bilingual learning
programmes (national languages) and civil service entrance
examinations.
3. **Technologies :** Flutter, Supabase (PostgreSQL), Node.js,
Express, LLM (Mistral AI & Gemini API).
4. **Result:** Final project of the end of undergraduate studies
successfully defended with a grade of 17/20.

Rental management – Group project (Technical manager and co-
designer)

5. A complete solution for managing rental properties,
tenants, lease agreements, and maintenance requests.
6. **Technologies :** Node.js, Express, Supabase (PostgreSQL),
React.js, Flutter, Web Dashboard.

Fundamental Analysis Trading Assistant – Individual Project (Lead
Designer & Developer)

7. AI-powered financial market analysis system designed to
evaluate macroeconomic indicators, market trends, and
technical data through a two-stage LLM pipeline.
8. **Technologies :** Python, FastAPI, FinGPT (fingpt-
forecaster_dow30), Phi-4 (Phi-4-mini-instruct), API yfinance,
API FRED, HTML/CSS/JavaScript.
9. **Result:** Successfully built an automated hybrid pipeline
capable of collecting live macro data, making deterministic
quantitative forecasts, and providing natural and
conversational market insights.
